AlcoHawk Pro Edition Alcohol Detector

The **AlcoHawk Pro Edition Alcohol Detector** is one of the most accurate semiconductor-oxide breathalyzers available. This new model takes a deeper breath sample from subjects and provides more accurate results than similar models. This model is trusted by many professional organizations for employee screening, emergency room care, and roadside testing.

The semiconductor sensor accuracy is $\pm 0.01\%$ BAC at 0.10% BAC and is DOT / NHTSA approved as an alcohol screening device. The AlcoHAWK Pro is also 510(k) Certified by the U.S. Food and Drug Administration. The AlcoHAWK Pro now includes innovative FlowCheck technology. An important aspect of breath testing is ensuring that subjects blow a large volume of air through the tester.

Flow-check will verify that enough air has been blown through the AlcoHAWK Pro before displaying a test result. If the Flow-check engages and recognizes that not enough air was blown, an error message will be displayed and a retest should be performed.
