# **BAC Chart For Women**

Below is a **BAC chart for women** or blood alcohol level estimation chart, which can be used as a guide only!

One of the best ways to test and obtain a more accurate BAC (Blood Alcohol Concentration) is with a specialist Alcohol tester. The chart provides you with a guide, but there other factors to think about. Some of the things you will need to think about are: when you have last eaten, maybe you feeling tired, your height and/or weight, gender, physical fitness, being on any medication at the time of testing and what's the alcohol percentage level of the drink or drinks.
